Anti-Shock Floor

Codice:

Impact absorbing surface composed of selected granules of recycled rubber derived from end-of-life tyres, with polyurethane fibres and the addition of pigments for the amalgam coloration. Excellent drainage. Cylindrical lateral holes on two opposite sides. Assembly system based on cylindrical Teflon connectors with blunt ends on both sides. The tile surface is with rounded edges and shaped bottom in order to lighten its structure. **Square tile depth cm 3,0 and cm 3,5 are not equipped with cylindrical lateral holes and pins in Teflon.** In compliance with the European Standards EN 1177. Colors: Red and Green.
